- If fever or other symptoms develops, [self-report](#) and contact healthcare provider

DEFINITIONS

- **Quarantine:** A 14-day period, beginning on the date of exposure to someone with COVID-19, during which an individual stays home in order to monitor for potential development of COVID-19-like symptoms and to prevent potential transmission of the virus.

- **Isolation:** A 10-day period, beginning at the onset of COVID-19-like symptoms, during which a symptomatic individual stays home and away from others to prevent transmission of the virus; For individuals who have not developed symptoms but who receive a positive COVID-19 test result, this 10-day period begins on the date of the individual's positive test.

- **Close Contact:** Exposure to a COVID-19-confirmed individual within 6 feet for 15 minutes or more (regardless of mask use) within the following periods of time: 48 hours before onset of the individual's illness or since the onset of the individual's symptoms, or 48 hours before or after the occurrence of a positive nasal swab test in an asymptomatic case.
